

Five Year Plan

By: Joseph Sidote

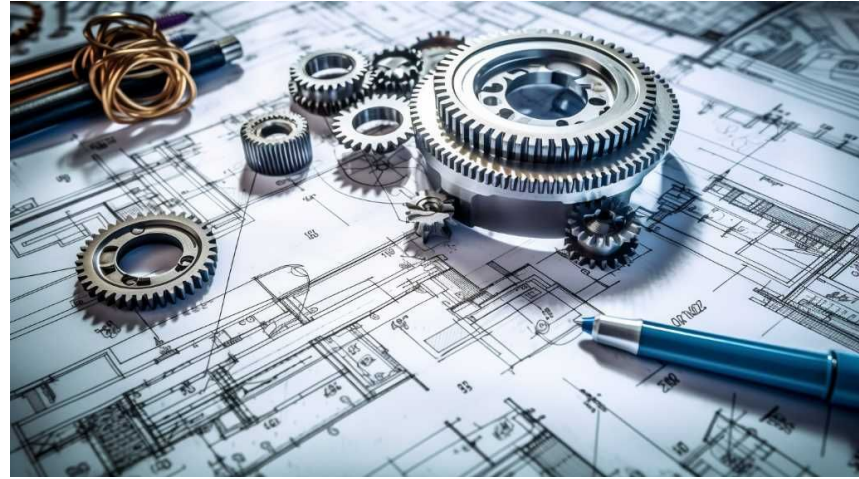

College

In the next 5 years I would like to be graduated from college with a bachelors and possibly working on a masters in mechanical engineering. For college I will be going to Central Connecticut State University.

Job

In 5 years I would like to have had a few internships while in college and possibly a concrete job in the engineering field by graduation. Also, throughout these 5 years I would like to have a job either on campus close by so I can continue to make some extra money.

Housing

In college I will most likely be living on campus until graduation. After, I would like to have a small apartment that's affordable with a roommate, and ideally near whatever job I have at the time.

Debt

After graduation I will most likely have 20-30 thousand dollars of debt. My plan for this is to constantly put part of my paycheck towards it. Even now I don't spend much money and keep as much as I can for the future.
